1 Exercise 23	1
----------------------	----------

1 Exercise 23

Write a function that formats the string “My name is `my_name` and I am `age` years old. I am learning the language `language_name`.” The function should format this string by assigning the following objects:

```
my_name = "Julien"  
age = 32  
language_name = "Python"
```

The function should return: “My name is Julien and I am 32 years old. I am learning the language Python.”
